A program by The Spanish Academy

STEM stands for **Science, Technology, Engineering, and Mathematics.** Through hands-on learning, children explore these subjects together while developing creativity, critical thinking, problem-solving skills, and Spanish language fluency through immersion.

What Will Children Do in the Class? Each week, children will participate in engaging, hands-on activities conducted entirely in Spanish. They will investigate, create, experiment, and discover while building:

- Critical thinking and problem-solving skills
- Observation and inquiry skills
- Early engineering and math concepts

Hands-On Learning Experience - Children learn by doing! They will explore with materials such as water, sand, magnets, ramps, building materials, shadows, and simple machines while making predictions, testing ideas, and discovering solutions. Our teachers nurture curiosity by asking open-ended questions like:

- What do you notice?
- What happened?
- What did you try?
- What do you think will happen if...?
- What else could you try?

Every activity encourages children to explore, discover, and build a strong foundation in STEM—all while learning in Spanish!

When:

- **Wednesdays for 3 years olds - 1:00 pm – 2:00 pm**
  Beginning January 6th – May 5th (No classes: Feb 3rd, March 24th, & April 7th)

- **Thursdays for Pre-K and Kindergarten - 1:00 pm – 2:00 pm**
  Beginning January 7th – May 6th (No classes: April 8th)

Cost:

- **Wednesdays for 3 years olds:** $300/semester
- **Thursdays for Pre-K and Kindergarten:** $340.00/semester

Registration: Register online in the Parent Portal.
